1. Introduction

Employee management is one of the most important functions in every organization. Managing employee onboarding and offboarding manually often leads to delays, paperwork, communication gaps, and human errors. Organizations require an automated system that can efficiently manage employee records, approvals, notifications, and departmental tasks.

The **Employee Management System** is a ServiceNow-based application developed using **App Engine Studio** to automate employee lifecycle processes. The application provides a centralized platform for managing employee information, onboarding requests, offboarding requests, approval workflows, email notifications, and task assignments for HR, IT, and Security teams. By automating these processes, the system improves efficiency, reduces manual effort, and ensures a smooth employee experience.

2. Project Overview

The **Employee Management System** is a low-code application developed on the **ServiceNow Platform** using **App Engine Studio** and **Flow Designer**. The application manages the complete employee onboarding and offboarding process through automated workflows.

The system allows employees or HR administrators to create onboarding and offboarding requests. Once a request is submitted, it is automatically routed to the appropriate manager for approval. Based on the approval decision, the system performs predefined actions such as creating HR, IT, and Security tasks, sending email notifications, updating request status, and maintaining employee records.

The project also implements **Access Control Lists (ACLs)** to ensure that only authorized users can access and modify application data. The automation provided by the system minimizes manual work, improves process transparency, and enables better coordination between departments.

3. Purpose of the Project

The primary purpose of this project is to automate the employee onboarding and offboarding process using the ServiceNow platform. The project aims to eliminate manual processing, reduce administrative workload, and improve the efficiency of HR operations.

The objectives of the project include:

- Automate employee onboarding and offboarding workflows.
- Maintain centralized employee records.
- Implement manager approval workflows.
- Automatically generate HR, IT, and Security tasks.
- Send automated email notifications during each process.
- Improve process tracking and transparency.
- Secure application data using Role-Based Access Control (ACLs).
- Reduce manual errors and increase organizational productivity.

By implementing this solution, organizations can manage the employee lifecycle more efficiently while providing a faster, secure, and standardized process for all stakeholders.

2.IDEATION PHASE 2.2 Empathize & Discover

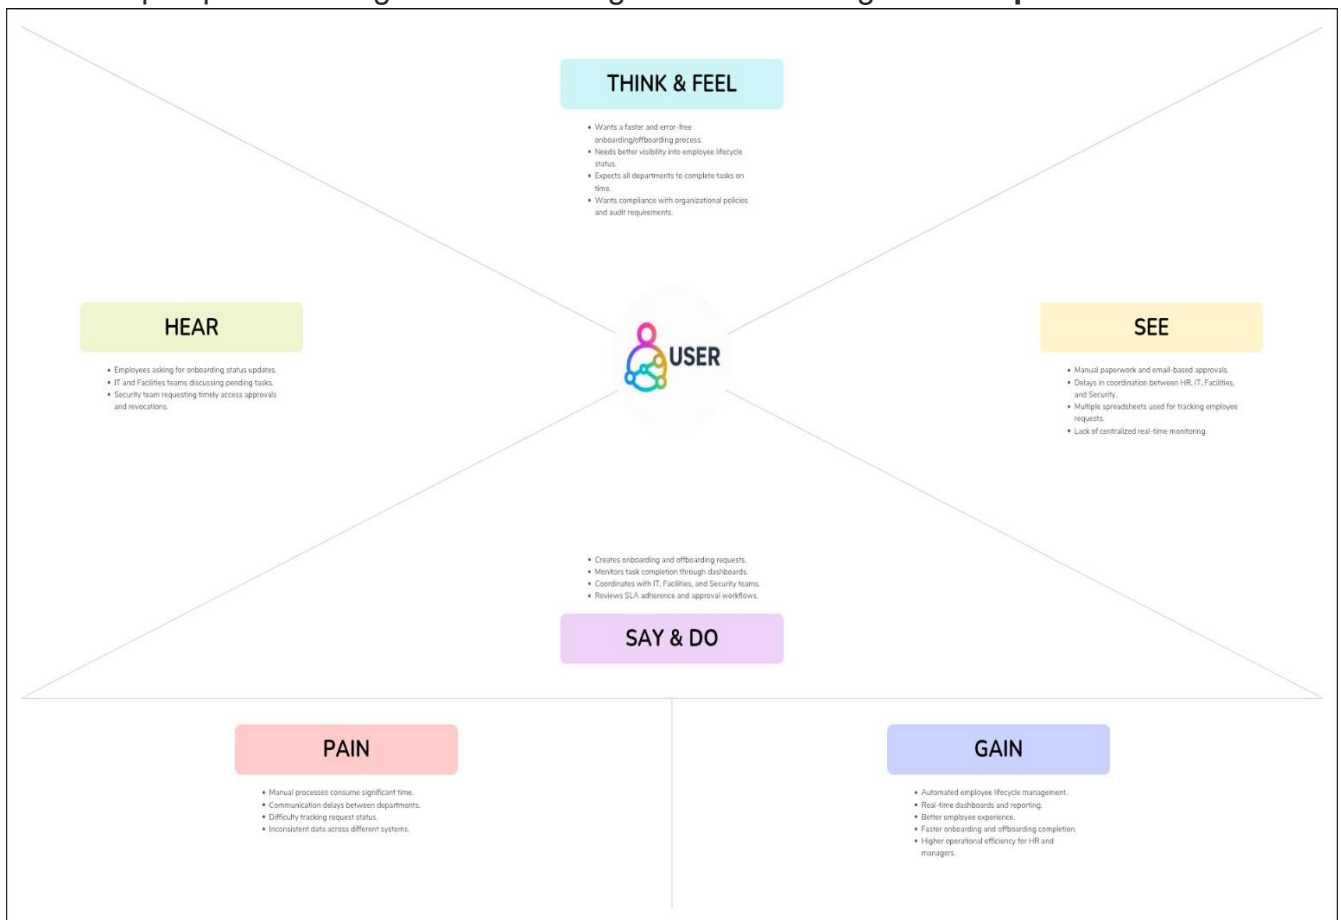

Date	28 June 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges. **Example:**

Ideation Phase Define the Problem Statements

Date	28 June 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service. **Example:**

Problem Statement(PS)	PS-1	PS-2
I AM(Customer)	HR Manager	Security Team Member
I'm Trying To	Manage employee onboarding and offboarding quickly and accurately	Complete employee access provisioning and deactivation on time
BUT	The process involves many manual approvals, paperwork, and coordination across departments.	I receive requests late and have limited visibility into task status
BECAUSE	There is no centralized automated workflow to manage employee lifecycle tasks.	Requests and approvals are not automated or properly tracked.
PWHICH MAKES ME FEEL	Frustrated due to delays, increased workload, and the risk of errors.	Stressed, inefficient, and concerned about security and compliance.

Ideation Phase

Brainstorm & Idea Prioritization Template

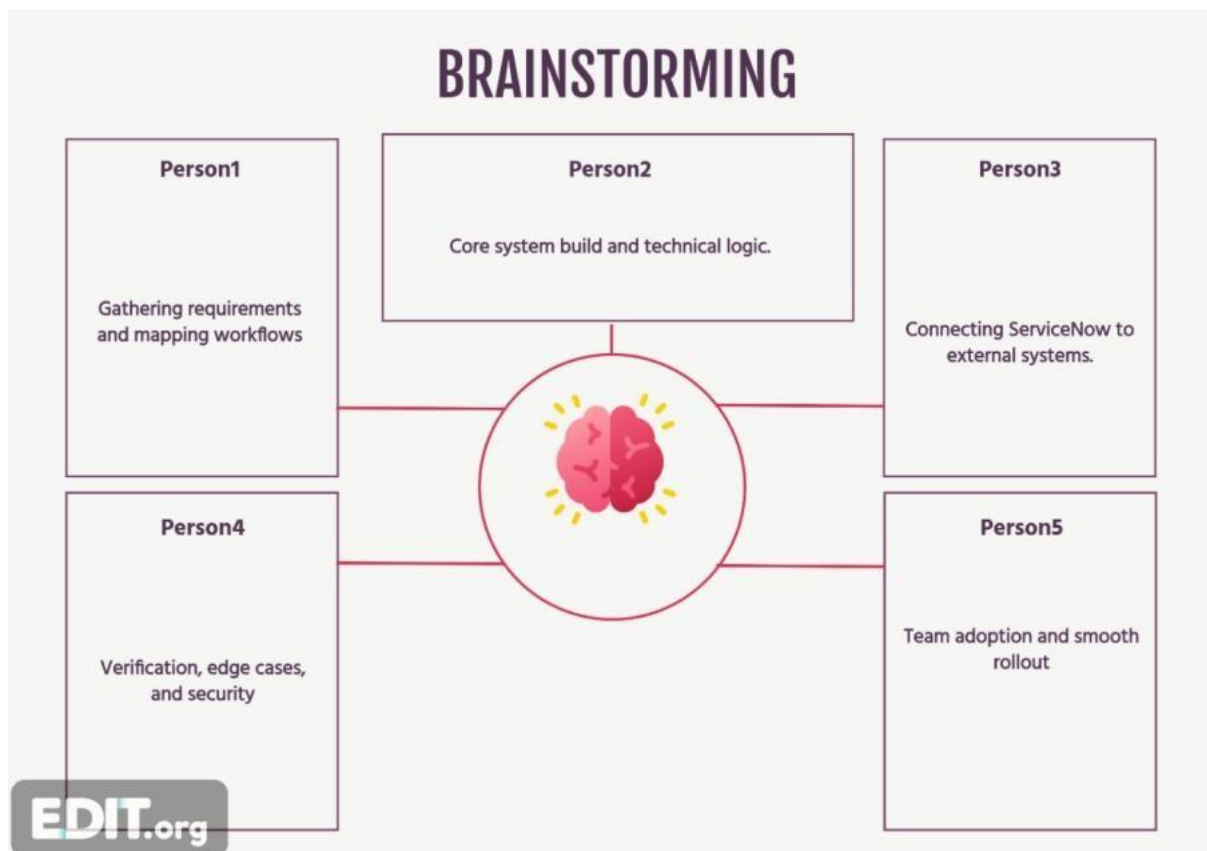

Date	6 July 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step 2: Brainstorming, Idea Listing and Grouping

S.No	Idea Description	Category
1	Automate employee onboarding request process	Workflow Automation
2	Automate employee offboarding process	Workflow Automation
3	Create Service Catalog items for onboarding and offboarding	Service Catalog
4	Generate automatic tasks for HR, IT, Facilities and Security	Task Automation
5	Configure approval workflows using Flow Designer	Approval Management
6	Implement role-based ACLs for secure access	Security
7	Configure SLA monitoring for task completion	SLA Management
8	Send automatic email notifications	Notification System
9	Design HR dashboards and reports	Dashboard & Reporting
10	Track employee lifecycle status in real time	Employee Tracking
11	Test complete onboarding/offboarding workflow	Testing
12	Improve compliance using audit trails	Compliance

Solution Requirements (Functional & Non-functional)

Date	06 July 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	4 Marks

Solution Requirements - Employee Management System

Functional Requirements

FR No	Functional Requirement	Description
FR-1	Employee Management	Create and maintain employee records.
FR-2	Onboarding Process	Submit onboarding request, manager approval, create HR/IT/Security tasks.
FR-3	Offboarding Process	Submit offboarding request, manager approval, create exit tasks.
FR-4	Workflow Automation	Automate approvals, email notifications and record updates using Flow Designer.
FR-5	Access Control	Allow only authorized users to create, read and update records using ACLs.

Project Design Phase-II

Non-Functional Requirements

NFR No	Requirement	Description
NFR-1	Usability	Simple and user-friendly forms in App Engine Studio.
NFR-2	Security	Role-based Access Control (ACL) protects application data.
NFR-3	Reliability	Flows execute consistently with approvals and notifications.
NFR-4	Performance	Automation reduces manual effort and processing time.
NFR-5	Availability	Application is available on the ServiceNow cloud platform.

NFR-6	Scalability	Can be extended with additional HR processes and modules.
-------	-------------	---

Data Flow Diagram & User Stories

Date	06 July 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee	Employee Registration	USN-1	As an employee, I can create a new employee	Employee record is successfully created.	High	Sprint-1
			record with personal and job details.

Technology Stack (Architecture & Stack)

Project Design Phase-II

Date	06 July 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Technology Stack - Employee Management System

Component	Description	Technology
User Interface	Application forms and lists	ServiceNow App Engine Studio
Application Logic	Workflow automation	Flow Designer
Approval Engine	Manager approvals	Ask for Approval Action
Database	Employee, Onboarding, Offboarding tables	ServiceNow Custom Tables
Notifications	Email alerts	ServiceNow Notification/Send Email
Security	Access Control	Roles and ACLs
Platform	Deployment	ServiceNow Personal Developer Instance (Cloud)

Project Design Phase

Problem – Solution Fit Template

Date	06 July 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ Understand the existing situation in order to improve it for your target group.

Project Design Phase-II

Section	Description
1. Customer Segment(s)	Employees, HR Team, Managers
2. Jobs-to-be-done	Employee Onboarding, Employee Offboarding, Approval Process
3. Triggers	New Employee Joining, Employee Resignation
4. Emotions (Before / After)	Before: Manual Process, Delays. After: Fast, Automated and Transparent Process
5. Available Solutions	Manual Forms, Email Process, ServiceNow Automation
6. Customer Constraints	Manual Work, Delayed Approvals, Tracking Issues
7. Behaviour	HR verifies requests, Manager approves/rejects requests, IT completes assigned tasks

8. Channels Online: ServiceNow Platform, Email Notifications. Offline: HR Team Communication

9. Problem Root Cause Manual Process, No Centralized Tracking, Human Errors

10. Your Solution Developed an Employee Management System using ServiceNow App Engine Studio. Automated employee onboarding and offboarding with Flow Designer, Manager Approval, Email Notifications, HR/IT/Security Tasks, and Access Control (ACLs).

Project Design Phase

Proposed Solution Template

Date	06 July 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	2 Marks

Proposed Solution Template

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
-------	-----------	-------------

1.	Problem Statement (Problem to be solved)	Organizations face delays and manual effort in employee onboarding and offboarding. Employee records, approvals, task assignments, and notifications are handled manually, leading to errors, lack of transparency, and inefficient tracking.
2.	Idea / Solution description	Develop an Employee Management System using ServiceNow App Engine Studio . The application automates employee onboarding and offboarding through custom tables, Flow Designer workflows, manager approvals, email notifications, HR/IT/Security task creation, and Access Control Lists (ACLs).
3.	Novelty / Uniqueness	Provides a centralized platform that integrates employee management, workflow automation, approvals, notifications, and security within a single ServiceNow application, reducing manual intervention.
4.	Social Impact / Customer Satisfaction	Improves employee experience with faster onboarding and offboarding, reduces HR workload, increases transparency, and
		ensures timely completion of organizational processes.
5.	Business Model (Revenue Model)	Can be deployed as an enterprise HR workflow solution for organizations using ServiceNow. Revenue can be generated through software licensing, implementation services, customization, and annual maintenance.
6.	Scalability of the Solution	The solution can be extended to include leave management, attendance, payroll integration, asset management, employee self-service, and additional HR workflows wit

Project Design Phase

Solution Architecture

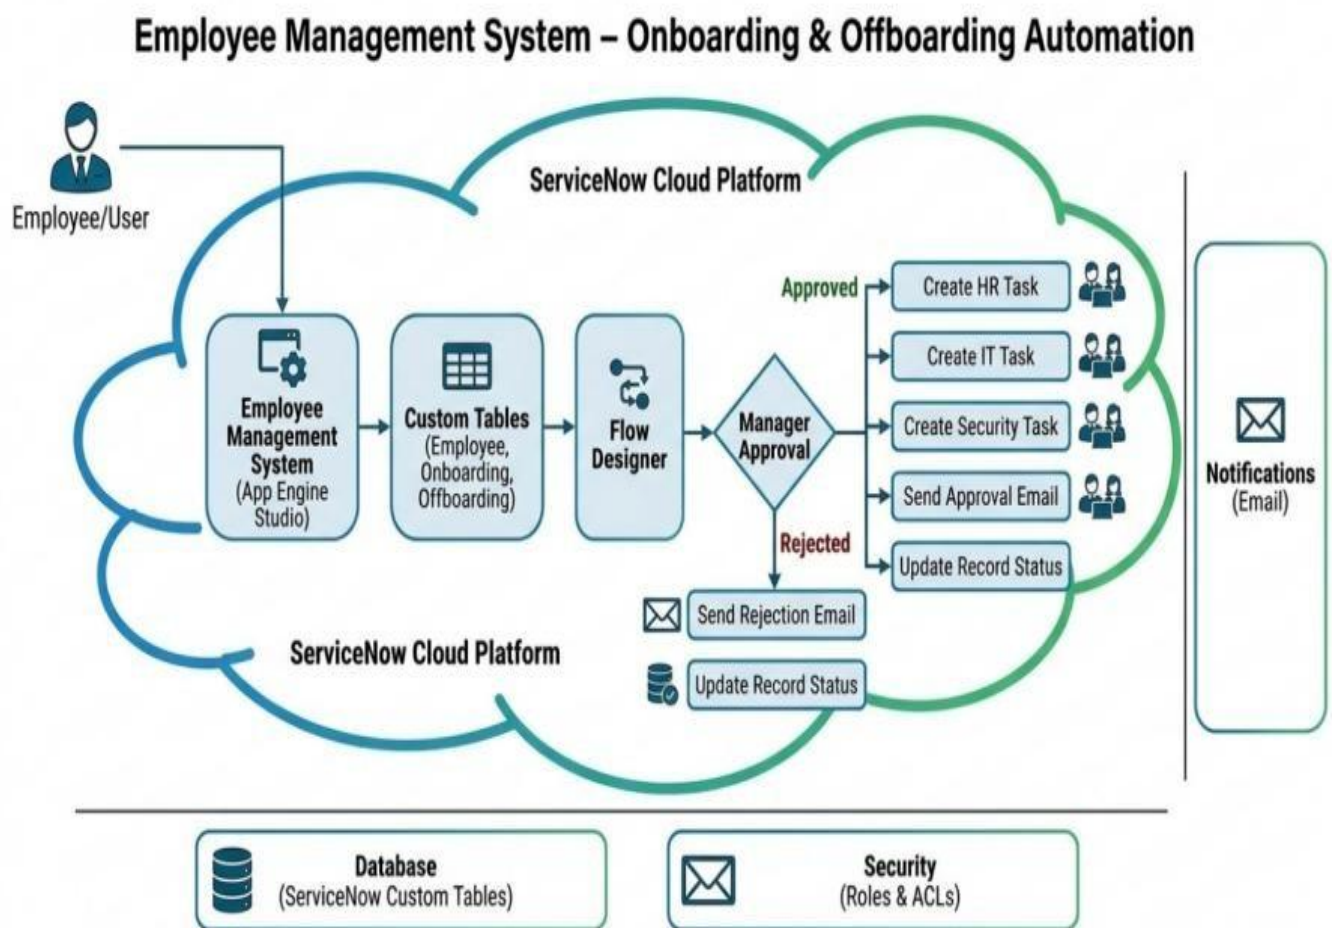

Date	06 July 2026
Team ID	SWTID-2026-2221
Project Name	Automated Employee Onboarding & Off boarding System
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

Sprint 1

Employee Management (Epic 1)

User Story	Story Points
------------	--------------

Create Employee Table (USN-1)	2
-------------------------------	---

Create Employee Form (USN-2)	2
------------------------------	---

Create Onboarding Table (USN-3)	3
---------------------------------	---

Onboarding Process (Epic 2)

User Story	Story Points
Build Onboarding Flow (USN-4)	5
Configure Approval Process (USN-5)	3
Configure Email Notification (USN-6)	2
Total Story Points Sprint-1	
$2 + 2 + 3 + 5 + 3 + 2 = 17$	

Sprint 2
Offboarding Process (Epic 3)

User Story	Story Points
Create Offboarding Table (USN-7)	3
Build Offboarding Flow (USN-8)	5
Create HR/IT/Security Tasks (USN-9)	5

Security (Epic 4)

User Story	Story Points
Configure Access Control (USN-10)	3
Testing & Validation (USN-11)	2

Total Story Points Sprint-2
 $3 + 5 + 5 + 3 + 2 = 18$

Total Story Points
Sprint-1 = 17
Sprint-2 = 18
Total Story Points = 35
Number of Sprints = 2
Velocity = $35 / 2 = 17.5 \approx 18$ Story Points per Sprint

8. ADVANTAGES & DISADVANTAGES

Advantages of the Employee Management System

1. **Automates Employee Lifecycle**
 - Automates onboarding and offboarding processes, reducing manual work and paperwork.
2. **Centralized Employee Data**
 - Stores employee, onboarding, and offboarding information in a centralized ServiceNow application for easy management.
3. **Workflow Automation**
 - Uses Flow Designer to automate approvals, task creation, email notifications, and status updates.
4. **Faster Approval Process**
 - Manager approvals are processed electronically, reducing delays and improving efficiency.
5. **Automatic Task Creation**
 - HR, IT, and Security tasks are automatically generated after approval, ensuring that all departments complete their responsibilities on time.
6. **Improved Communication**
 - Email notifications keep employees and stakeholders informed about request status and approvals.
7. **Enhanced Security**
 - Access Control Lists (ACLs) ensure that only authorized users can access or modify application data.
8. **Reduced Human Errors**
 - Automation minimizes data entry mistakes and improves process accuracy.
9. **Easy Tracking**
 - Employees and administrators can monitor the status of onboarding and offboarding requests throughout the process.
10. **Scalable Solution**
 - The application can be extended with additional HR modules such as leave management, payroll integration, attendance tracking, and asset management.

Disadvantages of the Employee Management System

1. **ServiceNow Dependency**
 - The application depends entirely on the ServiceNow platform and cannot function independently.
2. **Initial Configuration Time**
 - Setting up tables, workflows, approvals, notifications, and security requires initial development effort.
3. **Training Requirement**
 - HR staff and end users may require training to use the application effectively.
4. **Customization Complexity**
 - Adding advanced features or integrating with external systems may require additional ServiceNow development skills.
5. **Internet Requirement**

- As a cloud-based application, a stable internet connection is required to access the system.
- 6. **Maintenance Required**
 - The application requires periodic updates, workflow maintenance, and security reviews to ensure smooth operation.
- 7. **Role Management**
 - Incorrect ACL or role configuration can prevent users from accessing required information or performing authorized actions.
- 8. **Limited Offline Access**
 - The application cannot be used without access to the ServiceNow instance.
- 9. **FUTURE SCOPE**
- 10. The Employee Management System – Onboarding & Offboarding Automation developed on the ServiceNow platform has significant future enhancement opportunities. The current system automates employee onboarding, offboarding, approvals, notifications, and task management. In the future, the project can be expanded into a complete HR management solution with advanced features.

Future Enhancements

- Leave Management Integration ○ Add employee leave request and approval workflows.
 - Track leave balances and attendance records.
- Payroll Integration ○ Integrate the system with payroll applications.
 - Automatically update employee status changes for salary processing.
- Asset Management
 - Track laptops, ID cards, software licenses, and other assets assigned to employees.
 - Automate asset allocation during onboarding and asset return during offboarding.
- Employee Self-Service Portal ○ Allow employees to submit requests, check status, update profiles, and view notifications through a self-service portal.
- Advanced Reporting and Dashboards ○ Create real-time dashboards for HR managers.
 - Generate reports for onboarding trends, offboarding statistics, approval times, and departmental performance.
- AI-Based Automation ○ Use ServiceNow AI capabilities to predict delays, recommend actions, and automate repetitive HR tasks.
- Integration with External Systems ○ Connect with Active Directory, email systems, payroll software, and third-party HR applications.
- Mobile Application Support ○ Provide mobile access for managers and employees to approve requests and track activities from anywhere.
- Document Management
 - Store employee documents such as offer letters, ID proofs, and exit documents securely within the system.
- Multi-Department Workflow Expansion ○ Extend the solution to Finance, Administration, Facilities, and other departments for organization-wide process automation.

Conclusion

The future scope of this project is to transform the current onboarding and offboarding automation system into a comprehensive enterprise-level Human Resource Management solution.

By integrating additional HR modules, analytics, AI capabilities, mobile access, and external systems, the application can provide a highly scalable, secure, and intelligent employee lifecycle management platform for organizations of any size.
